

Kindermann at ISE 2011, 1-3 February 2011 in Amsterdam – booth 4O60

## Kindermann demonstrates its media technology competence at ISE 2011

*At ISE 2011, Kindermann is presenting a wide range of innovations in the field of media technology and demonstrating the practical application of these products in high-quality conference furniture. The range of digital signage solutions has also been expanded – Kindermann is showing these solutions at booth no. 4O60.*

Kindermann, the full-line provider for presentation, conferencing and media technology, is renowned for the manufacture of high-quality niche products. The portfolio includes ceiling mounts and lifts for projectors of any size, MultiMedia connection systems up to functional conference room furniture demonstrating the practical application of media technology. Quality, functionality and simple operation are the hallmarks of these products and design is also essential for harmonious integration into conference rooms.

### **The perfect connection**

CablePort, the modular connection system, and Quickselect, the intelligent interface, are perfect examples of modern media technology, which is an integral element of modern conference rooms today. CablePort allows smooth and flush integration into any conference table. The newly developed flap ensures easy access to connection ports. The modular construction facilitates individual assembly of electricity, A/V, data and network connections and makes retrofitting very easy. If several CablePorts are in use, Quickselect provides the perfect connection. For example, each participant can transmit his/her presentation from a notebook to the projector, or the leader of a meeting can provide access to connected devices.

### **The modern conference table**

As an example of the practical application, Kindermann exhibits a height-adjustable conference table which is also equipped with two displays that can be lifted as required. Cutting-edge laser technology is used to integrate the desktop casings with covers in the design of the table surface, ensuring minimal impact on the surface veneer.

## **Hidden virtues on closer inspection**

At first glance, MaxxMount is a stable mount for flat screens or interactive whiteboards with projectors, which is also suitable for mobile use. Only at a second glance are its real qualities visible: from elegant cable routing to motorised height adjustment. Kindermann is presenting a sideboard solution with MaxxMount for video conferencing at ISE.

## **Digital signage shows you the way**

Kindermann has been active in the digital signage market for many years. With a range extending from door signs and pillars to complete solutions such as EVA, the digital interactive information terminal. Digital signage will be a key issue at this year's ISE. Door signs with various screen sizes, from 7 – 24 inches, will be on display. Visitors will be able to get a feel for the easy-to-operate Easescreen digital signage software by trying it out at the exhibition stand.

## **Elegant furniture with built-in intelligence**

One black and one white media sideboard, both real eye-catchers, demonstrate how media technology and furniture can form a perfect union. But it is the clever details that make them so unique. Kindermann presents visual media control via the iPad. At the touch of a button, a flap opens and the projection screen moves into position, the projector is switched on and the presentation may begin. The doors of the sideboard are electromagnetically locked and can be opened via the media control. The entire solution is password protected.

## Press release

### **The Kindermann profile**

Kindermann, an innovative expert in presentation and conference technology, has an excellent reputation for high quality and user-friendly solutions.

Its comprehensive sales programme, which is one of the biggest of its branch in Europe, consists of a wide range of products from the single projector to the complete equipment of conference rooms. A big percentage of all these products is developed and produced by Kindermann.

The sales programme is divided up into three sectors: "presentation", "installation" and "conferencing".

The sector "presentation" stands for projectors and flat screen displays.

The sector "installation" comprises all system and installation components as well as digital signage.

In the sector "conferencing" Kindermann offers solutions to meet sophisticated demands in the fields of conference technology and modern media. This includes audio and video conferences.

As a manufacturer and distributor, Kindermann supports its dealers by providing them with competent technical advice and individual guidance for projects – including planning a system, supplying the technology, and caring for its integration. Attractive special services round up the portfolio.
