

Elegant furniture with integrated IQ

Today presentation technology is an integral part of every conference room and many offices. But technology is only functional and should not dominate the room. This idea was the basis for the development of the Kindermann media furniture.

Extravagant media sideboards

At the ISE Kindermann presented furniture with integrated media technology. A black media sideboard drew the visitors' attention to the Kindermann booth. It signalled to them that the surfaces of the media furniture can be individually designed according to the customer's wishes.

As a novelty the technology can be controlled via an iPad. Press a key and a lid opens, the screen is lifted into position, the projector is switched on and the presentation can start. The doors of the media sideboard have electro-magnetic locks and can be opened via the media control. The whole unit is password protected against unauthorized access.

When developing the media furniture, Kindermann lays great weight on the perfect integration of the technology. If not in use, it should not be visible. This is demonstrated by a media sideboard with a built-in lift for the display. The flat screen display is integrated in a casing, whose design and colour correspond to those of the sideboard. When the display is not needed, the sideboard is just an elegant piece of furniture.

Each piece of furniture can be custom-made according to the customer's wishes. This includes the design, the integrated technology and the media control. The technology and its different functions decide about the size of the media sideboard, which consists of modules. Easy access for maintenance was a special aim in the development. The players can be placed on a 19" rack. The media sideboard can be optionally equipped with a flat screen display up to 47" or a wide angle projector for wall projection behind a special glass pane.

An alternative would be a projection trolley with a lift for the projector. It can be pulled out of the sideboard when needed. For companies which want to arrange

Press Release

video conferences in different rooms, Kindermann offers the mobile media sidebar on castors.

Conference table FIN

FIN is the name of an elegant glass table, which has the shape of a fin. Due to this shape it is also ideal for video conferences. The cable and signal management is integrated in the designer base. Via remote control or by pressing a button the installation module is lifted and gives access to all the connections.

Copy length: 2.500 characters.

The Kindermann profile

Kindermann, an innovative expert in presentation and conference technology, has an excellent reputation for high quality and user-friendly solutions.

Its comprehensive sales programme, which is one of the biggest of its branch in Europe, consists of a wide range of products from the single projector to the complete equipment of conference rooms. A big percentage of all these products is developed and produced by Kindermann.

The sales programme is divided up into three sectors: "presentation", "installation" and "conferencing".

The sector "presentation" stands for projectors and flat screen displays.

The sector "installation" comprises all system and installation components as well as digital signage.

In the sector "conferencing" Kindermann offers solutions to meet sophisticated demands in the fields of conference technology and modern media. This includes audio and video conferences.

As a manufacturer and distributor, Kindermann supports its dealers by providing them with competent technical advice and individual guidance for projects – including planning a system, supplying the technology, and caring for its integration. Attractive special services round up the portfolio.
